

Case Study: Parkview Hotel

With over 70 APs installed and 600 concurrent users, Parkview Hotel chose IgniteNet’s cloud-managed solution to increase performance and decrease operating costs.

OVERVIEW

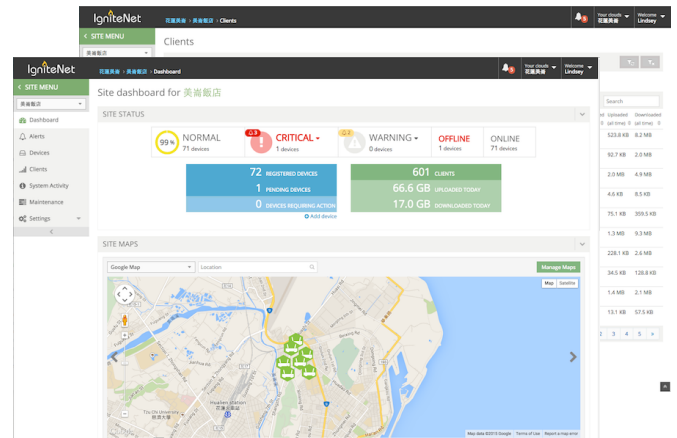

Opened in 1993, Parkview Hotel was born to the beat of Hualien's heart. As the first five-star luxury resort hotel in Hualien, Parkview breathes and moves to the groove of Hualien’s rhythm since its conception. Situated in the embrace of the deep blue sea and dense hill ridges, Parkview Hotel is a gateway to Hualien’s beautiful landscape. And with more than 340 guest rooms, Parkview Hotel is ready to handle all types of travelers - from eco-tourist to those just looking for a relaxing weekend.

THE PROBLEM

Parview Hotel’s previous wireless network was not living up to the same standards as the rest of the hotel - nor was it moving with the same groove and rhythm as it should. Parkview Hotel’s management team began searching for a new solution that would provide the same level of service as the rest of their hotel’s operations.

THE SOLUTION

Parkview Hotel chose IgniteNet’s cloud-managed WiFi solution to become the new standard of network access for its entire hotel. After a quick installation, the new network was up and running with little downtime. And best of all, the hotel management team can see what is happening on the network day or night from anywhere in the world - even from their mobile phones.

“IgniteNet’s WiFi solution has not only improved network access for our guests but also helped to reduce our costs at the same time.”
Manager, Parkview Hotels

IgniteNet’s cloud management makes it easy from provisioning to maintenance
